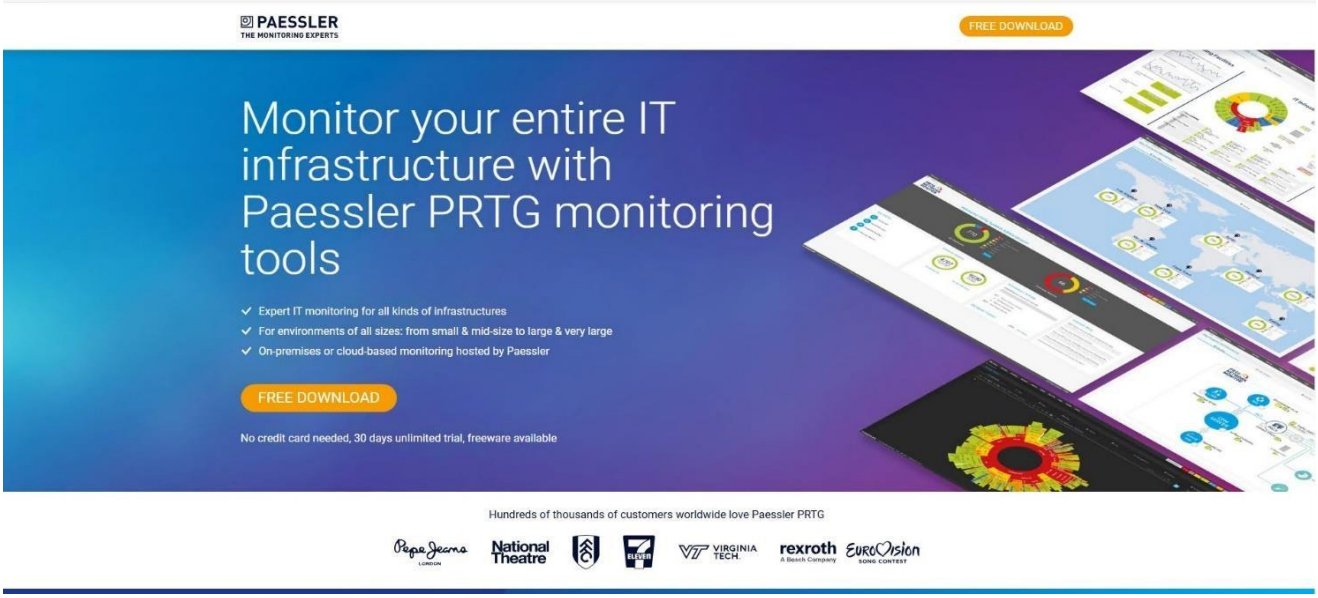
What is PRTG?

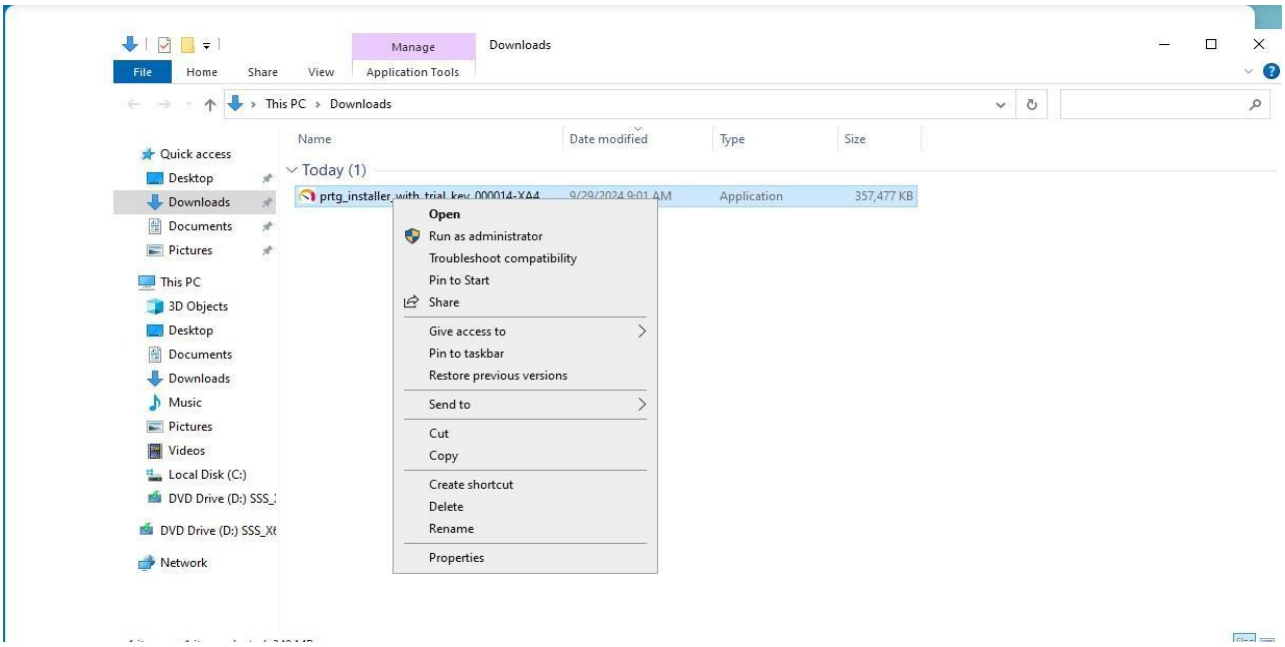
PRTG (Paessler Router Traffic Grapher) is a network monitoring software developed by Paessler AG. It provides a comprehensive solution for monitoring your entire IT infrastructure, from servers and network devices to applications and cloud services. PRTG helps administrators keep an eye on the health, performance, and usage of networks and systems, ensuring that they can identify and troubleshoot issues before they lead to significant problems.

Step 1: Download PRTG

1. **Visit the PRTG website: Go to the Paessler website and download the PRTG Network Monitor installer.**

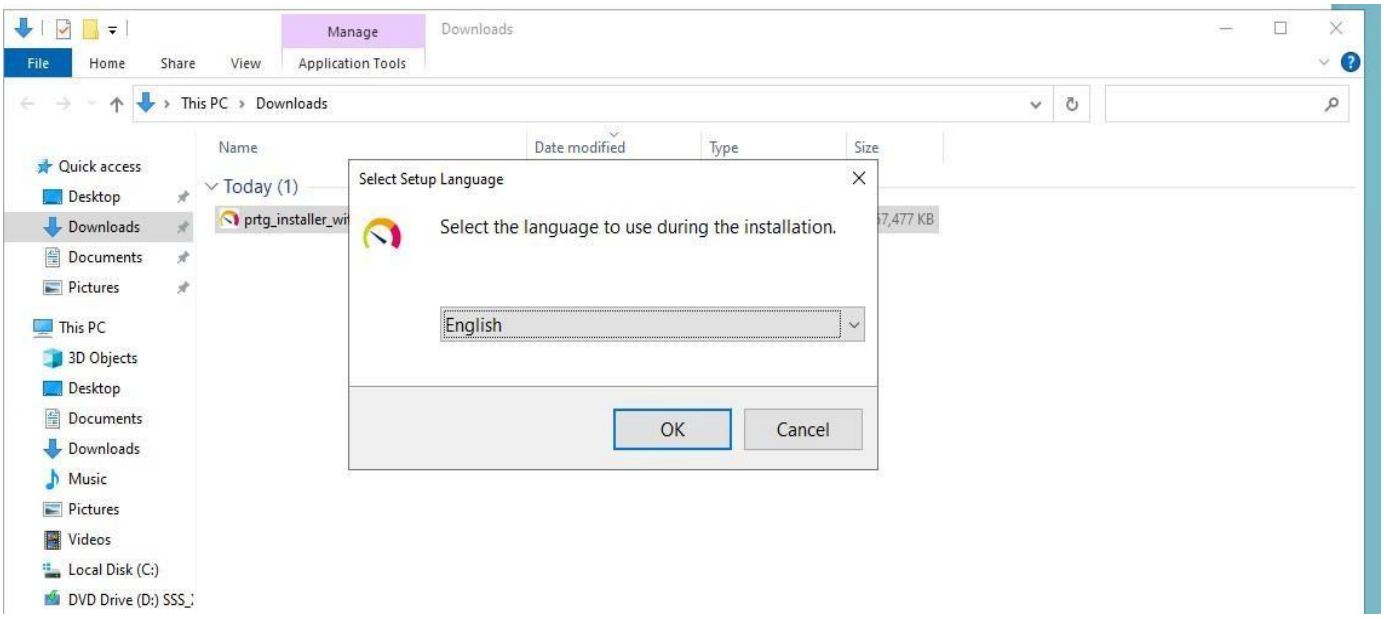


2. **Run the installer: Save the .exe file and run it as an administrator.**

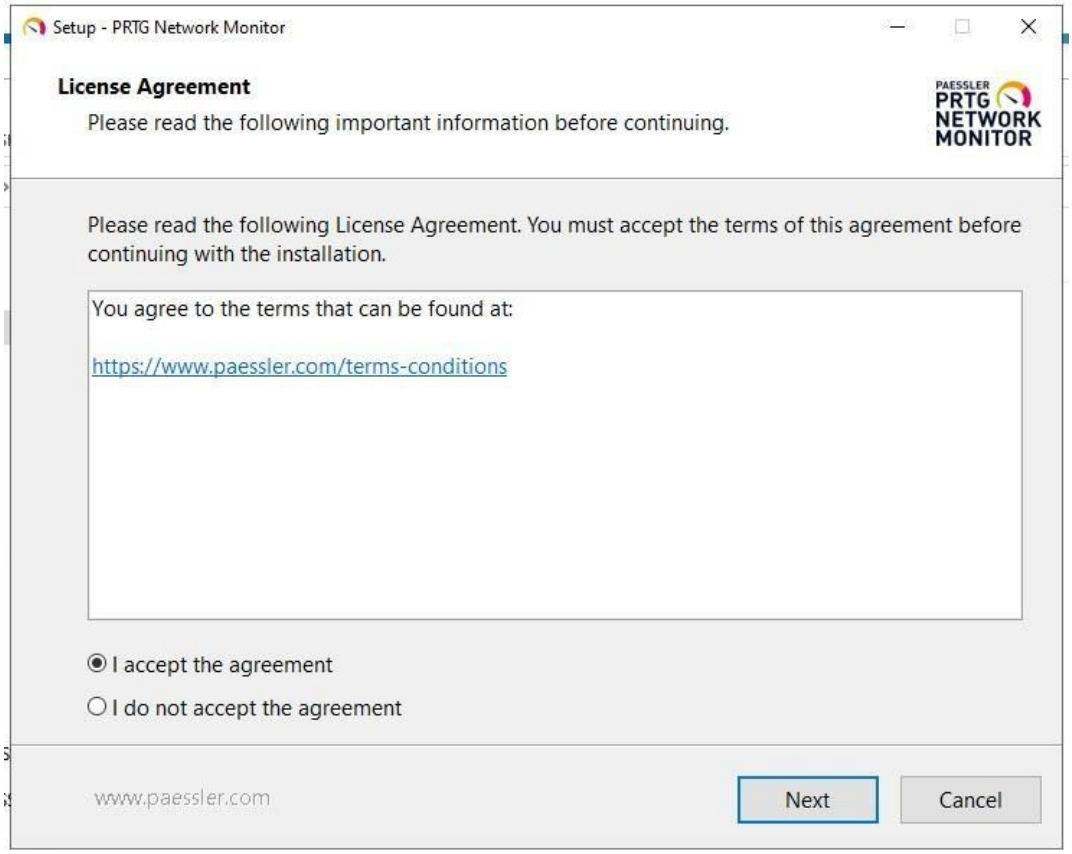


Step 2: Install PRTG

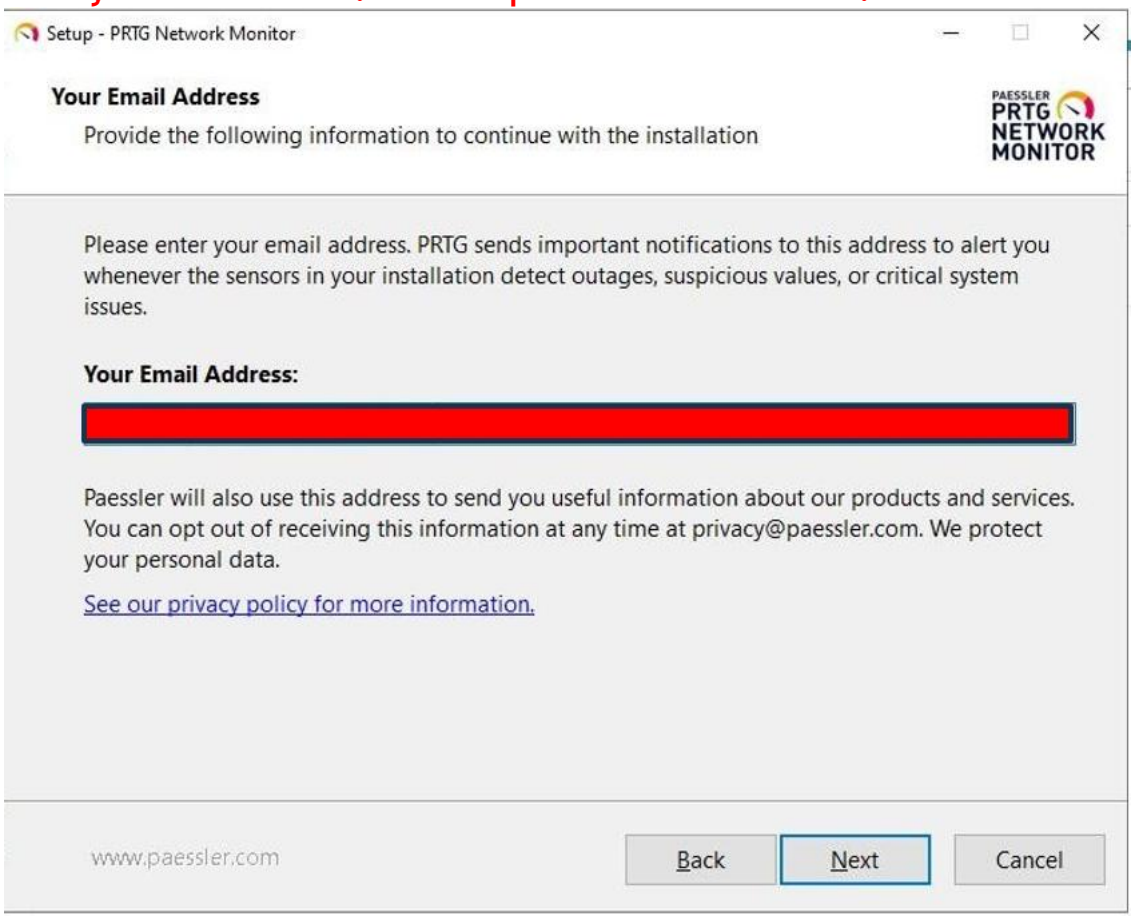
1. **Select language: Choose your preferred language.**



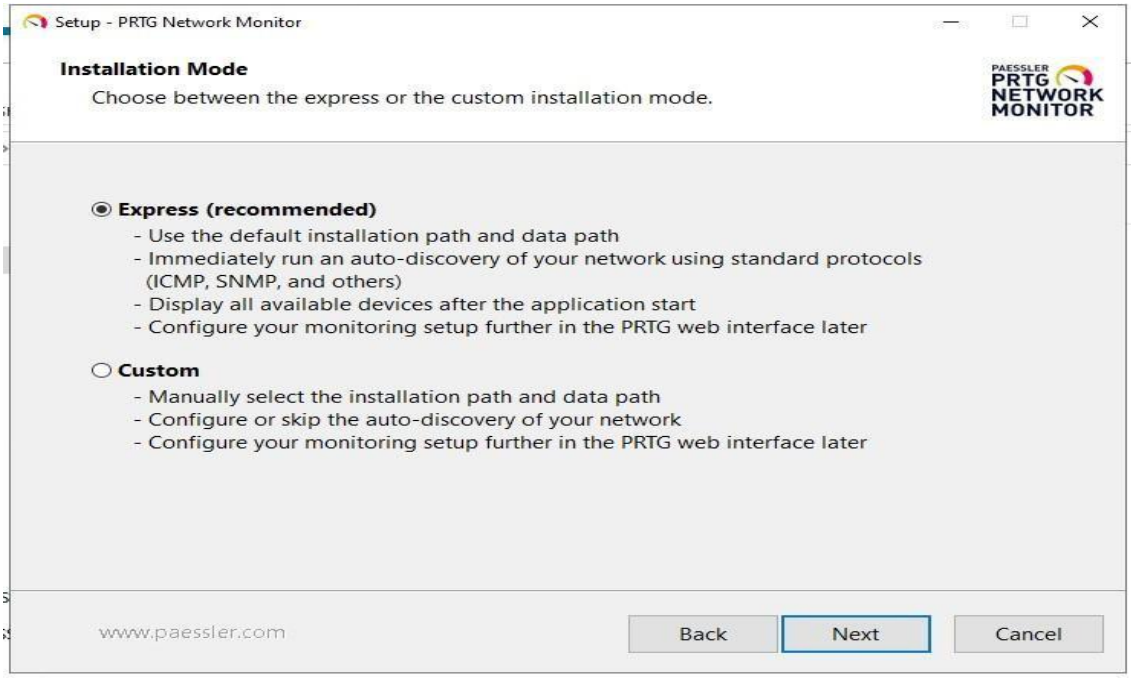
2. **Accept terms and conditions: Read and accept the license agreement.**



3. **Enter your email address: This is required for the installation.**

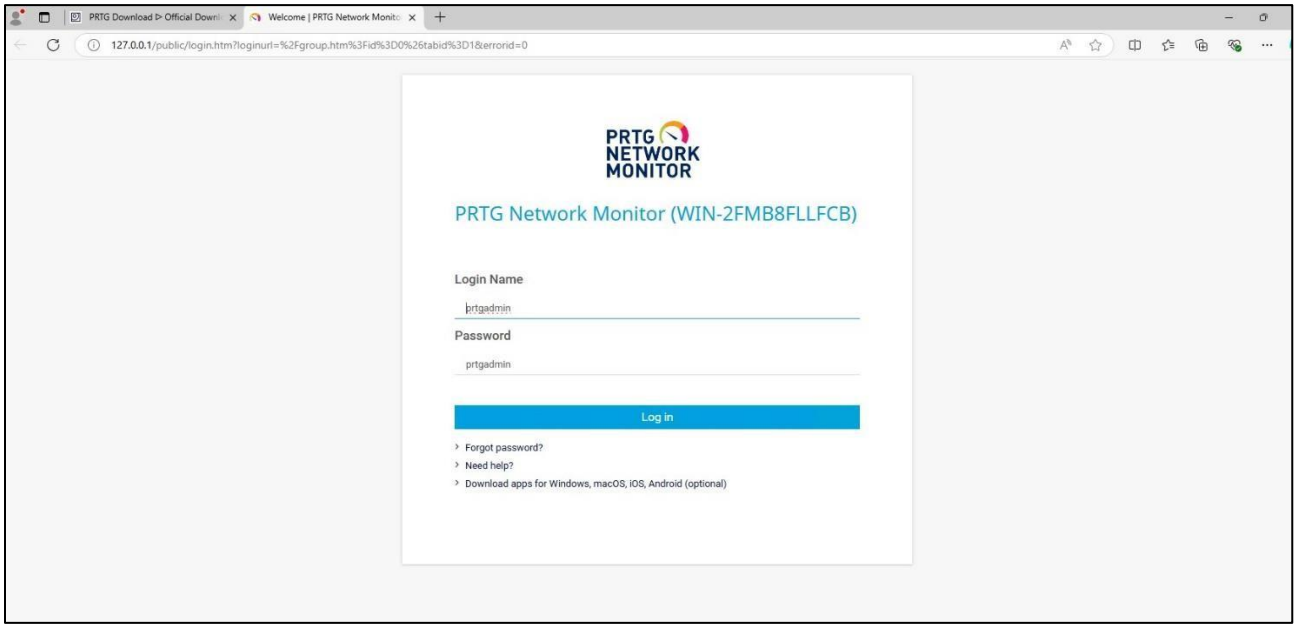


4. **Choose installation type: Select the express installation option for a quick setup.**



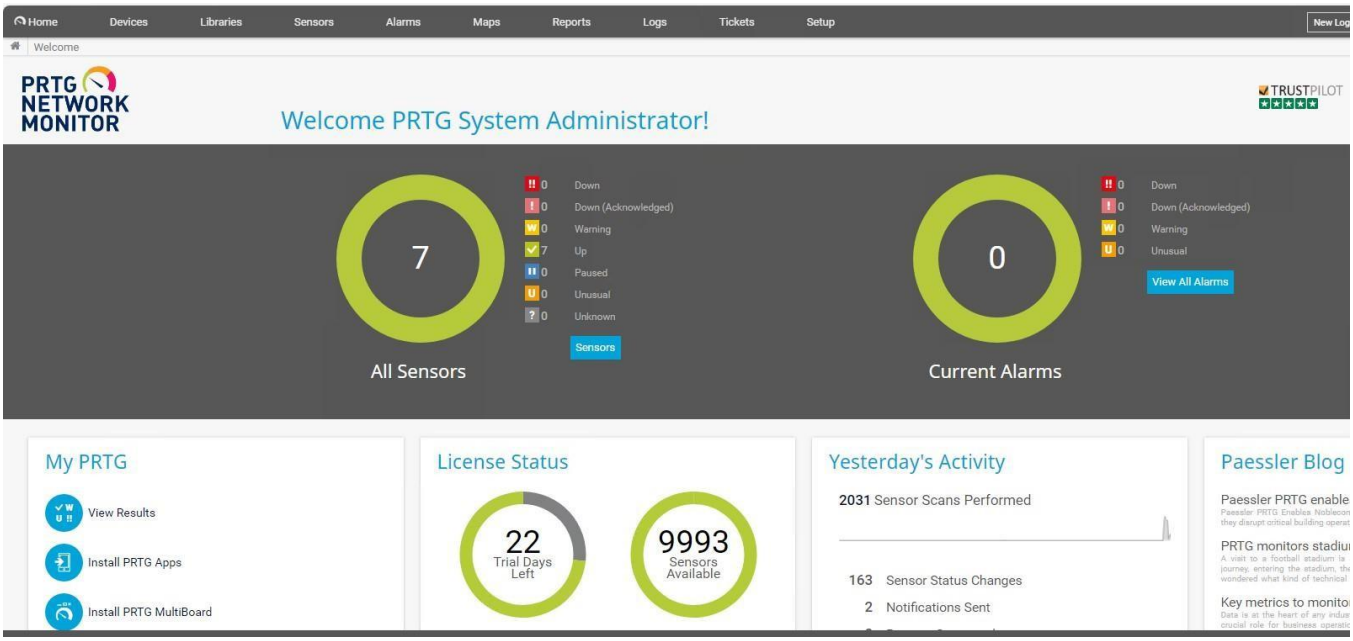
Step 3: Initial Configuration

1. **Access the web interface: After installation, your web browser will open the PRTG web interface.**



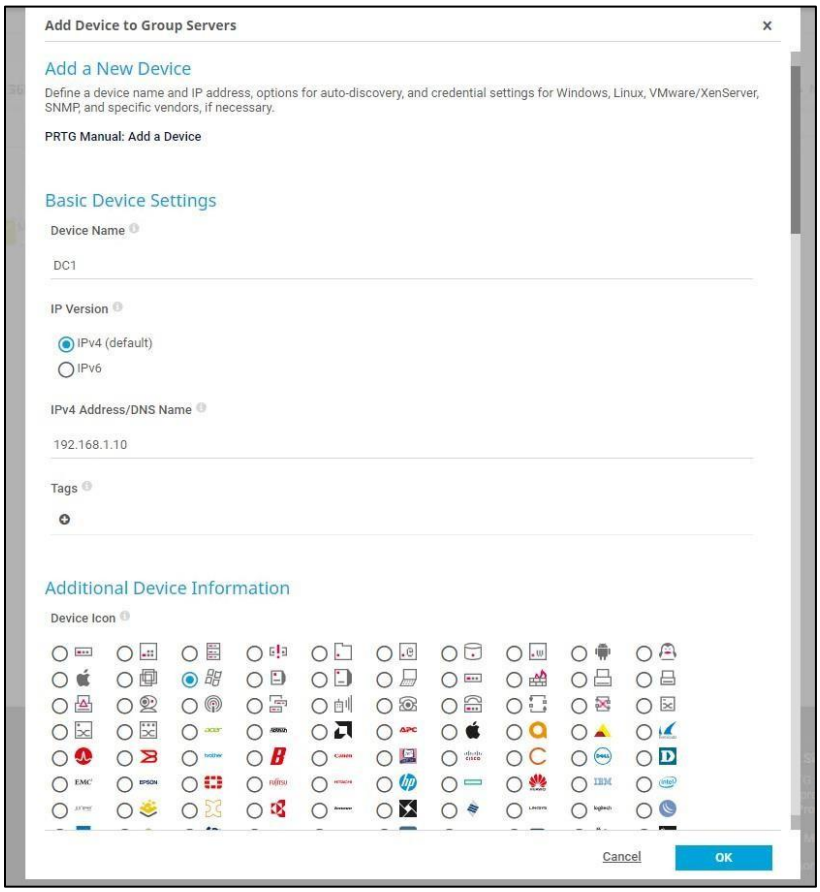
2. **Login: Use the default credentials provided during installation.**

3. **Skip the welcome tour: You can skip the tour if you prefer to explore on your own.**

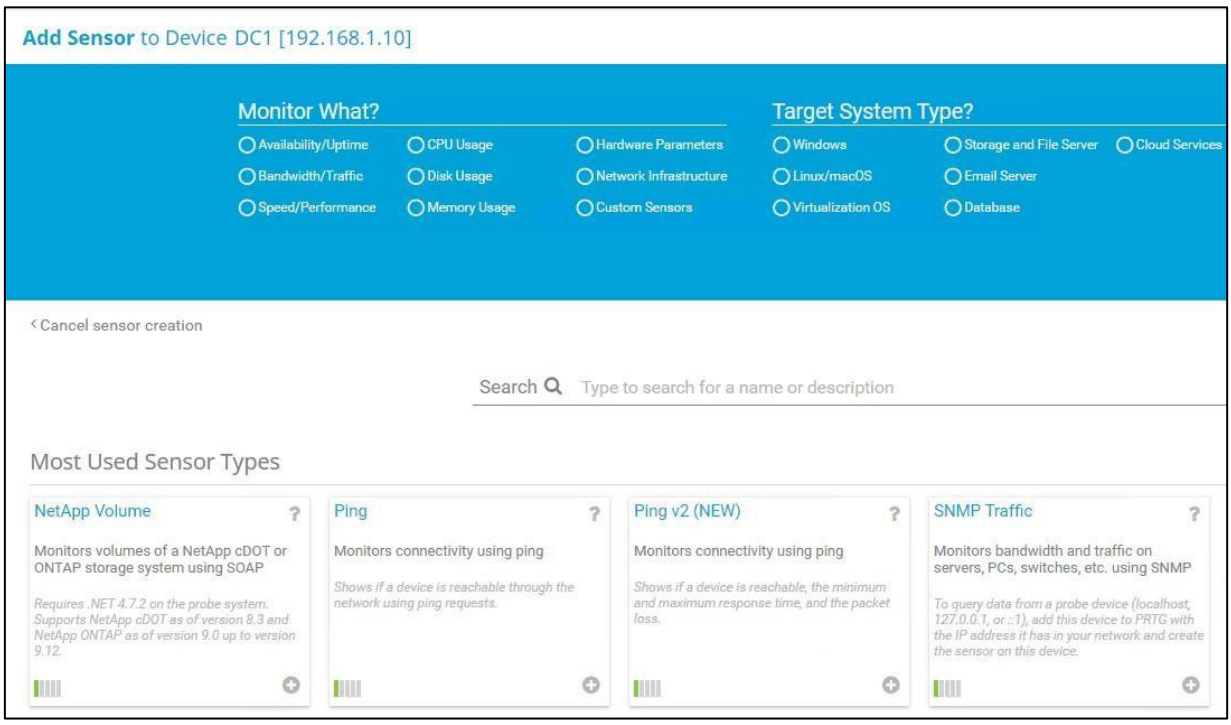


Step 4: Add Devices and Sensors

1. **Add a device: Enter the name and IP address of the device you want to monitor.**

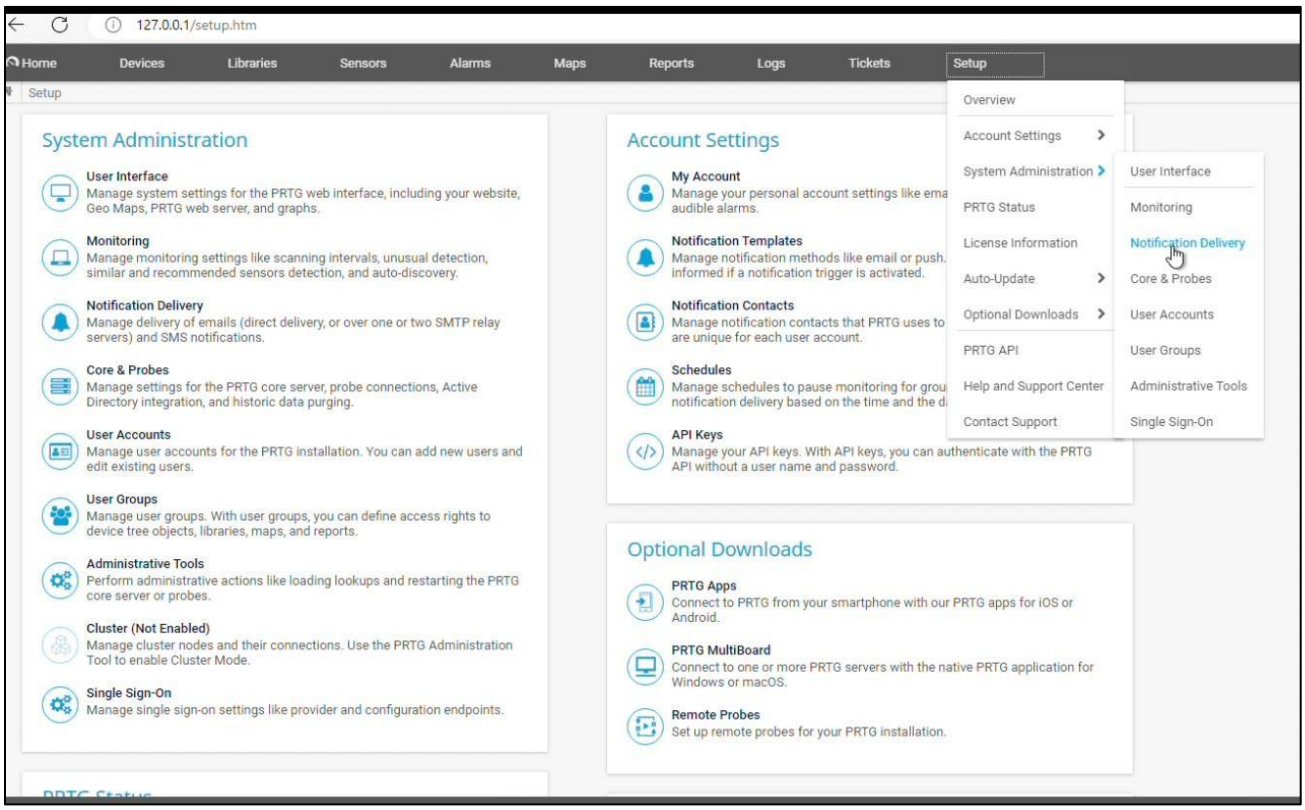


2. **Add sensors: Choose the type of sensors you need, such as SNMP, WMI, or Ping sensors, to monitor different aspects of your network.**

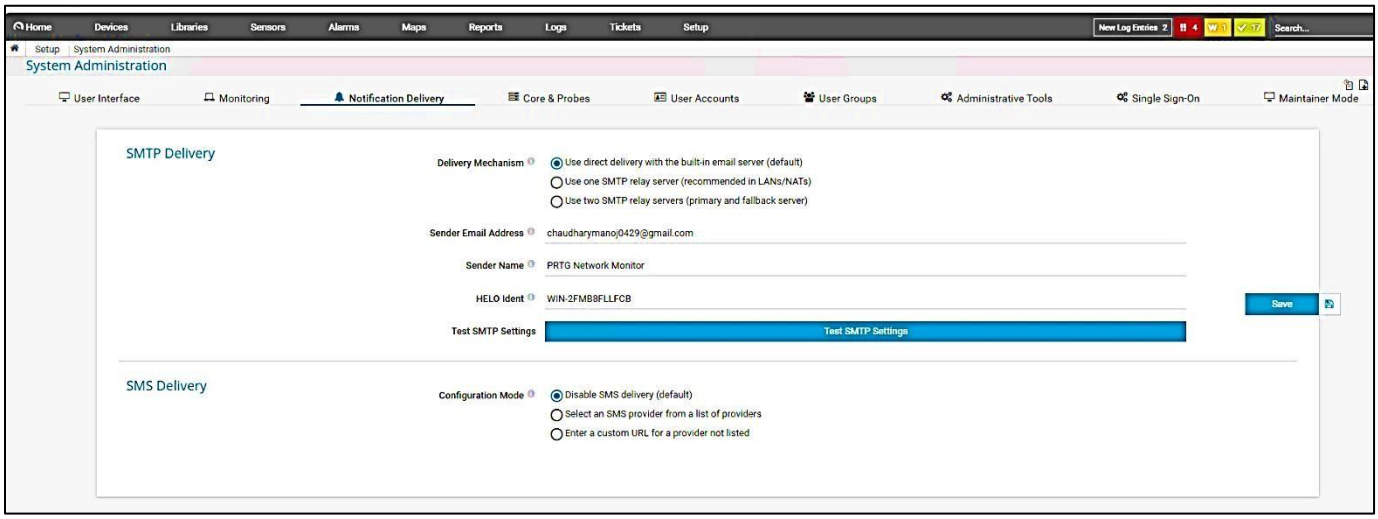


Step 5: Configure Notifications

1. **Set up notifications: Configure email, SMS, or push notifications to alert you of any issues.**

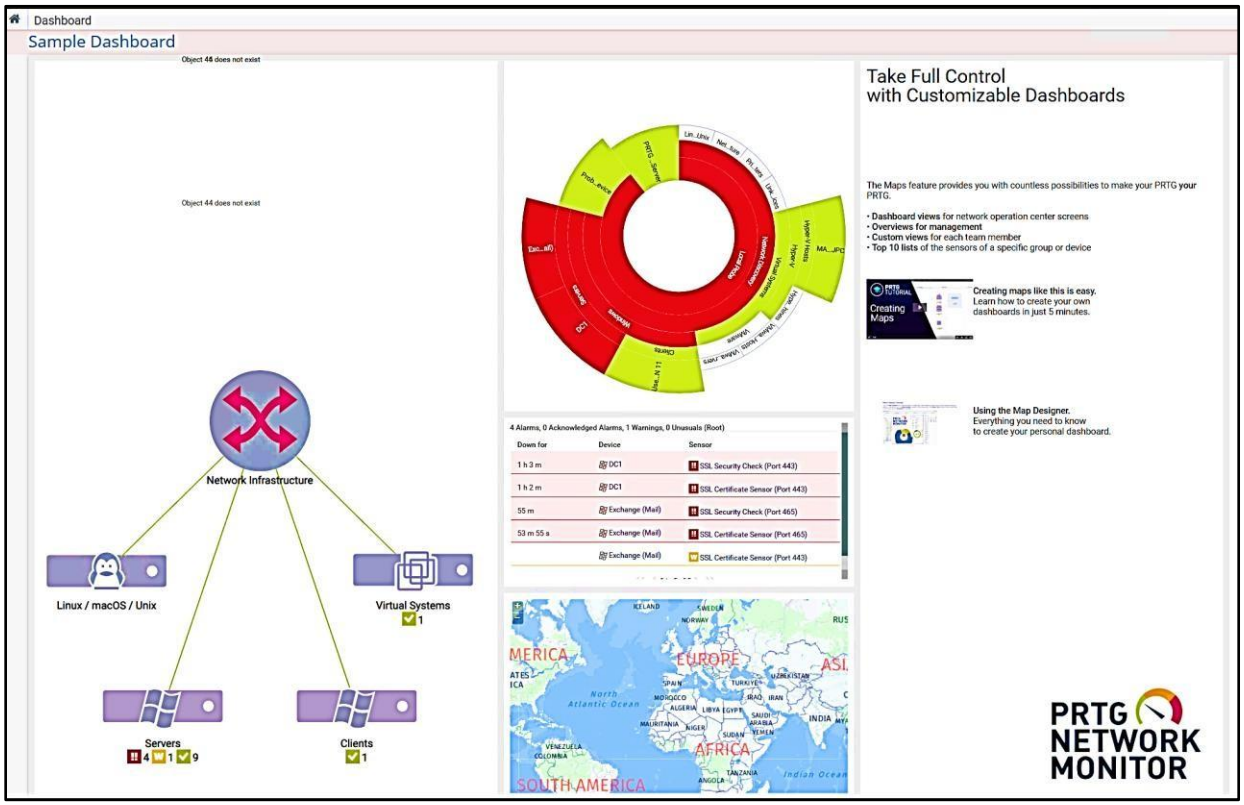


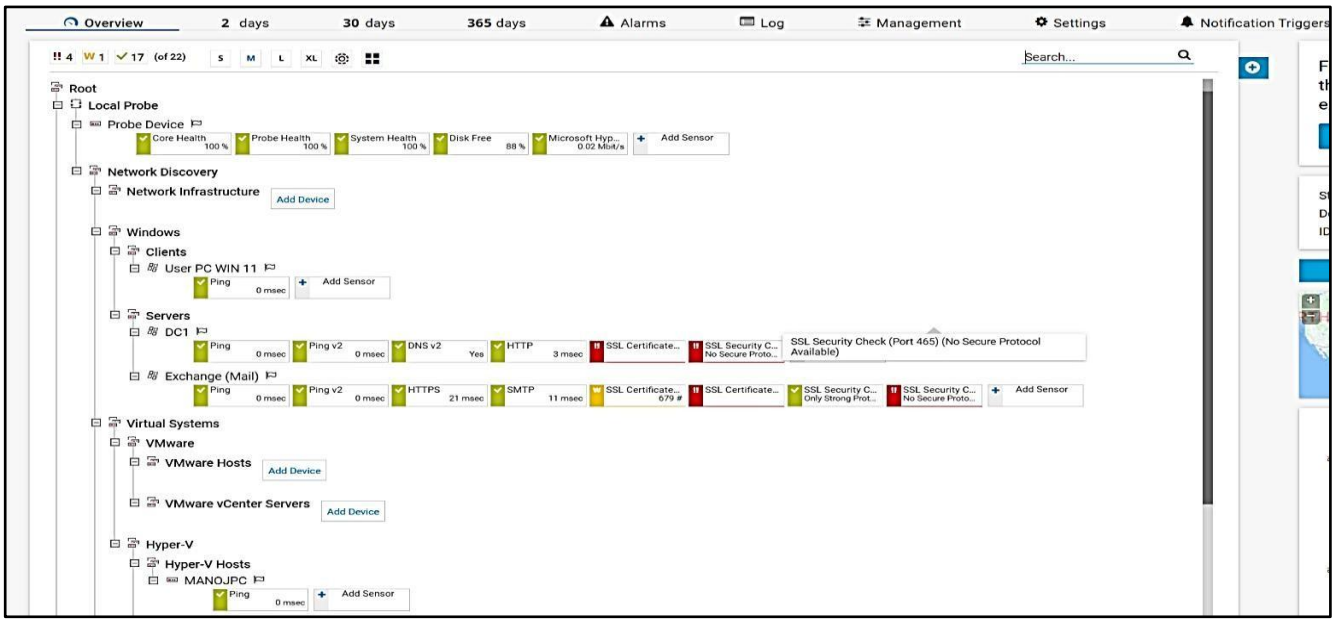
2. **Test notifications: Ensure that your notification settings are working correctly.**

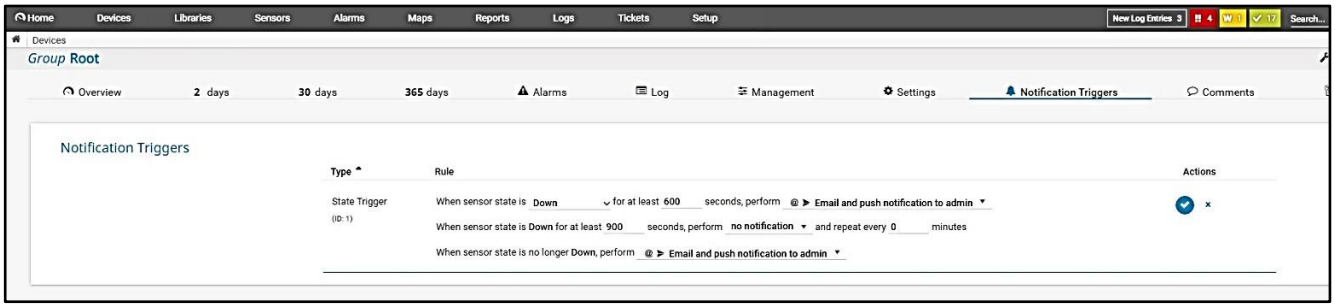


Step 6: Review and Fine-Tune

1. **Review your setup: Check the dashboard for any issues or alerts.**







2. **Fine-tune settings: Adjust sensor settings, thresholds, and notification triggers as needed**
